

Pressure Supervisory Switches

These switches are operated by supervised fluid pressure applied to a built-in bellows, diaphragm or Bourdon tube which is mechanically linked to the switch member. The normal arrangement provides for the switch contacts to open automatically if the supervised pressure is reduced to a potentially unsafe point. Other equipment then acts to shut down the combustion process, as applicable. For alarm or other purposes, the switch action may be the reverse.

Switches having a means of adjusting the operating pressure range require cover removal to accomplish adjustment.

When ordering, specify type, model, maximum operating pressure, temperature, fluid handled, electrical characteristics and operating pressure desired.

Pressure Supervisory Switches for Fuel Oil

Types DAF, DSF, DRF, DRW, DSW, DAHF, DSHF

Types DAF, DSF, DRF, DRW, DSW, DAHF, DSHF. See listing under PRESSURE SUPERVISORY SWITCHES for Fuel Gas & Ventilating or Combustion Air.

Company Name:	Mercoïd Div Dwyer Instruments Inc
Company Address:	Box 373, Michigan City, Indiana 46360, USA
Company Website:	http://www.mercoïd.com
Listing Country:	United States of America
Certification Type:	FM Approved
